

## WICHITA EAR CLINIC

Wichita Ear Clinic was established in 1892 and is a physician owned Otology, Neurotology, and Cochlear Implant Center. We are looking for an Otologist/Neurotologist to join our practice. We provide complete state-of-the-art patient care with full audiology, vestibular, and

hearing aid services. We are a busy cochlear implant center with on-site programming. Our working relationship with our neurosurgical colleagues is excellent and our physicians perform both microsurgical resection and stereotactic radiotherapy for cranial base tumors.

Wichita is currently building a 470, 000 square foot Health Sciences Center in the heart of downtown Wichita. This Biomedical facility will combine the Wichita campuses of KU School of Medicine, KU School of Pharmacy, Wichita State University's College of Health Professions, and WSU Tech's Health Professions Program into one location. The campus is expected to be completed this year and will have an estimated 3000 students and 200 faculty. This will provide additional teaching, research, and collaboration opportunities for interested candidates. Academic appointments with Kansas University School of Medicine-Wichita is available. Our practice frequently has KU-Wichita medical students and Wichita State University audiology students join us for clinical rotations. Teaching and academic opportunities are available for interested candidates, however not required.

This is an incredible opportunity to join a well-established single specialty practice. Our practice has full benefits, profit sharing/retirement plan, and excellent hours. Wichita is a safe growing city and an excellent place to raise a family. We do not have general otolaryngology call responsibilities, and our on-call hours are light. Recent graduating fellows and established practitioner inquiries are welcome. Partnership opportunity is anticipated within 1-2 years for interested candidates.

I look forward to speaking with those interested in our practice and this opportunity. Please email, text, or call me for further information.

Sincerely,

John M. Lasak, MD
